                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, Application US/10254394

Publication No. US2003009636A1

GENERAL INFORMATION:
APPLICANT: Kundsen, Ida Molgaard

TITLE OF INVENTION: Method for Production of Recombinant
FITLE OF INVENTION: Proteins in Eukaryote Cells
FILE REFERENCE: 6480.500-US
CURRENT APPLICATION NUMBER: US/10/254,394

Many of these proteins require calcium for their biological function and calcium-binding sites have been found to be located at the N-terminus of particular EGF-like domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note="EGF; Region: EGF-like domain. There is no clear separation between noise and signal. pfam00053 is very similar, but has a instead of conserved cystaines. Includes some cytokine receptors. The EGF domain misses the N-terminus regions of the Ca2+ binding EGF domains. The family is hard to model due to many similar but different sub-types of EGF domains. Pfam certainly misses a number of EGF domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   804 CTTCTTCTTGGAGTCCAGAAGGATTGCCTGCCAAGGACTGTCACCCTGCTTCGTCAGCGT 745
